Aptus Drawdown Managed Equity ETF

Trading Symbol: ADME

Summary Prospectus

November 8, 2019

Listed on Cboe BZX Exchange, Inc.

www.aptusetfs.com

Before you invest, you may want to review the Fund’s Prospectus and Statement of Additional Information (“SAI”), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated August 31, 2019, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund’s Prospectus, reports to shareholder, and other information about the Fund online at www.aptusetfs.com/funds/adme. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

IMPORTANT NOTE: Beginning on January 1, 2021, paper copies of the Fund’s shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the shareholder reports from your financial intermediary, such as a broker-dealer or bank. Instead, the shareholder reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

You may elect to receive all future Fund shareholder reports in paper, free of charge. If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to inform them if you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

Investment Objective

The Aptus Drawdown Managed Equity ETF (the “Fund”) seeks capital appreciation with downside protection.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). This table and the example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Acquired Fund Fees and Expenses ¹	0.02%
Total Annual Fund Operating Expenses	0.81%

¹ Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. Total Annual Fund Operating Expenses do not correlate to the expense ratios in the Fund’s Financial Highlights because the Financial Highlights include only the direct operating expenses incurred by the Fund and exclude Acquired Fund Fees and Expenses.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$83	\$259	\$450	\$1,002

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal year ended April 30, 2019, the Fund’s portfolio turnover rate was 321% of the average value of its portfolio.

Principal Investment Strategy

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its objective principally by investing in a portfolio of typically 40 to 50 U.S.-listed equity securities, while limiting downside risk by purchasing exchange-listed put options on one or more broad-based indexes or ETFs that track the performance of the U.S. equity market. Under normal circumstances, at least 80% of the Fund’s net assets (plus borrowings for investment purposes) will be invested in equity securities.

The equity component of the Fund’s portfolio is drawn from the universe of the 1,000 largest U.S.-listed common stocks and real estate investment trusts (“REITs”). Aptus Capital Advisors, LLC, the Fund’s investment adviser (“Aptus” or the “Adviser”), selects the equity securities for the Fund based on an analysis of each company’s fundamental and momentum characteristics to try to identify attractive opportunities for growth. The Adviser’s proprietary analysis is built from a “yield plus growth” framework, which takes into account fundamental characteristics such as yield, growth, and valuation, along with momentum, to determine the final security selection. Each company in the Fund’s investment universe is analyzed and scored to determine an overall ranking of potential holdings. Holdings will have either an attractive combination of yield plus growth relative to the overall market and/or strong momentum relative to the overall market. Typically, the Fund will equal weight the equity holdings in its portfolio, although such weights may change due to changes in the value of each security in the portfolio over short or long periods of time.

The Adviser seeks to limit the Fund’s exposure to equity market declines primarily by purchasing exchange-listed put options on one or more broad-based indexes or ETFs (each, a “reference asset”) that track the performance of the U.S. equity market (“Broad Market Puts”). A put option gives the purchaser the right to sell shares of the reference asset at a specified price (“strike price”) at a specified date (“expiration date”). The purchaser pays a cost (premium) to purchase the put option. In the event the reference asset declines in value, the value of the put option will generally increase, and in the event the reference asset appreciates in value, the put option may end up worthless and the premium may be lost. The Adviser may purchase Broad Market Puts that are at-the-money, near-the-money, or out-of-the-money (also known as a “tail hedge”), and the Adviser will actively manage the Fund’s Broad Market Puts as markets move to roll forward expiration dates or to increase or decrease market exposure. The Adviser generally expects to invest less than 2% of the Fund’s net assets in Broad Market Puts at the time of investment.

In addition to purchasing Broad Market Puts, the Adviser may write (sell) an equal or lesser number of Broad Market Puts with the same reference asset and expiration date as the Broad Market Puts purchased by the Fund, but with a lower strike price. A written (sold) put option obligates the seller to buy shares of the reference asset at a strike price at the expiration date. The writer (seller) of the put option receives an amount (premium) for writing (selling) the option. In the event the reference asset declines in value below the strike price and the holder exercises the put option, the writer (seller) of the put option will have to pay the difference between the strike price and the value of the reference asset, and in the event the reference asset appreciates in value, the put option may end up worthless and the writer (seller) of the put option retains the premium. The put options written by the Fund are “covered” because the Fund owns at least an equivalent number of put options on the same reference asset with the same expiration date and a higher strike price at the time it sells the options.

In addition to or in lieu of such Broad Market Puts, the Adviser may buy or write (sell) call options on the Cboe Volatility Index® (the “VIX® Index”). The VIX Index reflects a calculation designed to produce a measure of constant, 30-day expected volatility of the U.S. stock market, derived from real-time, mid-quote prices of S&P 500® Index call and put options. A call option gives the purchaser the right to purchase shares of the reference asset at a specified strike price at a specified expiration date. The purchaser pays a cost (premium) to purchase the call option. In the event the reference asset appreciates in value, the value of the call option will generally increase, and in the event the reference asset declines in value, the call option may end up worthless and the premium may be lost. The Adviser generally expects to invest less than 0.50% of the Fund’s net assets in VIX Index call options at the time of investment.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund’s Prospectus, titled “Additional Information About the Funds-Principal Investment Risks.”

- **Concentration Risk.** To the extent the Fund invests more heavily in particular industries or groups of industries, its performance will be especially sensitive to developments that significantly affect those industries or groups of industries.

- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks, such as those held by the Fund, are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **ETF Risks.** The Fund is an ETF and, as a result of an ETF’s structure, is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of the Shares will approximate the Fund’s NAV, there may be times when the market price of the Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of the Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for the Shares in the secondary market.
 - *Trading.* Although Shares are listed for trading on a national securities exchange, such as Cboe BZX Exchange, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Management Risk.** The Fund is actively managed and may not meet its investment objective based on the Adviser’s success or failure to implement investment strategies for the Fund.
- **Mid-Capitalization Companies Risk.** The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole. Some medium capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to large-capitalization companies.
- **Options Risk.** Selling (writing) and buying options are speculative activities and entail greater than ordinary investment risks. The Fund’s use of call and put options can lead to losses because of adverse movements in the price or value of the reference asset, which may be magnified by certain features of the options. When selling a put option, the Fund will receive a premium; however, this premium may not be enough to offset a loss incurred by the Fund if the price of the underlying asset is below the strike price by an amount equal to or greater than the premium. Purchasing of put or call options involves the payment of premiums, which may adversely affect the Fund’s performance. Purchased put or call options may expire worthless resulting in the Fund’s loss of the premium it paid for the option.
- **REIT Investment Risk.** A REIT is a company that owns or finances income-producing real estate. Through its investments in REITs, the Fund is subject to the risks of investing in the real estate market, including decreases in property revenues, increases in interest rates, increases in property taxes and operating expenses, legal and regulatory changes, a lack of credit or capital, defaults by borrowers or tenants, environmental problems and natural disasters.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors.
 - *Consumer Discretionary Sector Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics, and consumer preferences. Companies in the consumer discretionary sector depend heavily on disposable household income and consumer spending and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.

- *Health Care Sector Risk.* Companies in the health care sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, an increased emphasis on the delivery of healthcare through outpatient services, loss or impairment of intellectual property rights and litigation regarding product or service liability.
- *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.
- **Tail Hedge Risk.** The Fund may purchase put options designed to mitigate the Fund's exposure to significant declines in the broader U.S. equity market. However, there is a risk that the Fund will experience a loss as a result of engaging in such options transactions. Moreover, there can be no assurance that the tail hedge will be successful in protecting against all or any declines in the value of the Fund's portfolio because the amount of protection provided by the put options purchased by the Fund and the price of such protection will be dictated by prevailing market sentiment at the time the tail hedge is triggered. Additionally, the tail hedge will not protect against declines in the value of the Fund's portfolio where such declines are based on factors other than general stock market fluctuations.

Performance

The following performance information indicates some of the risks of investing in the Fund. The bar chart shows the Fund's performance for calendar years ended December 31. The table illustrates how the Fund's average annual returns for the 1-year and since inception periods compare with those of a broad measure of market performance. The Fund's past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Performance prior to November 8, 2019 reflects the Fund's former strategy; its performance may have differed if the Fund's current strategy had been in place. Updated performance information is also available on the Fund's website at www.apfusetfs.com.

For the year-to-date period ended June 30, 2019, the Fund's total return was 7.09%. During the period of time shown in the bar chart, the Fund's highest quarterly return was 9.01% for the quarter ended September 30, 2018, and the lowest quarterly return was -22.83% for the quarter ended December 31, 2018.

Average Annual Total Returns for the Period Ended December 31, 2018

Aptus Drawdown Managed Equity ETF ¹	<u>1 Year</u>	Since Inception (6/8/2016)
Return Before Taxes	-5.88%	5.65%
Return After Taxes on Distributions	-6.07%	5.47%
Return After Taxes on Distributions and Sale of Shares	-3.34%	4.34%
S&P 500 Total Return Index (reflects no deduction for fees, expenses, or taxes)	-4.38%	8.94%

¹ The information in this table reflects the average annual total returns of the Fund prior to its change in strategy on November 8, 2019.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts.

Management

Investment Adviser

Aptus Capital Advisors, LLC serves as investment adviser to the Fund.

Portfolio Managers

John D. ("JD") Gardner, Chief Investment Officer and Managing Member at the Adviser, has been a portfolio manager of the Fund since August 2017.

Beckham D. Wyrick, Portfolio Manager and Chief Compliance Officer at the Adviser, has been a portfolio manager of the Fund since August 2017.

Purchase and Sale of Shares

Shares are listed on a national securities exchange, such as the Exchange, and most investors will buy and sell Shares through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. Creation Units generally consist of 50,000 Shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the "Deposit Securities") and/or a designated amount of U.S. cash.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
